SUMMARY

M.Tech student in Computer Science at MNIT Jaipur with interests in Machine Learning, Deep Learning, Generative AI, LLM Agents, RAG Systems, and AI Security.

EDUCATION

- **Malaviya National Institute of Technology, Jaipur** Expected 2027
M.Tech in Computer Science and Engineering
- **MBM Engineering College, Jodhpur** Graduated 2024
B.Tech in Electrical and Electronics Engineering

EXPERIENCE

- **Pangrow.com** Dec 2023 – Jul 2024
Full Stack Developer Jaipur
 - Implemented RBAC-based access control using React.js, Redux, and JWT authentication.
 - Developed a dynamic multi-stage filtering system using React.js and Redux.
 - Optimized API calls and state management, reducing redundant requests by 30%.
- **Playwise.gg** Sep 2023 – Mar 2024
Full Stack Developer Jaipur
 - Built an admin dashboard using Next.js and Node.js to manage 1000+ users and platform workflows.
 - Contributed to a scalable multi-round tournament management system with real-time synchronization.
 - Improved frontend performance, increasing Lighthouse score from 62 to 84 through React and Redux optimization.

PROJECTS

- **SmartForm AI Agent - Memory-Augmented Form Automation**
Python • FastAPI • LLMs • RAG • ChromaDB • SQLite
 - Developed an AI agent that automates form filling by extracting information from uploaded documents and mapping it to required form fields.
 - Built a memory-augmented RAG pipeline using ChromaDB and semantic search to retrieve relevant information from previously uploaded documents and automate future form submissions.
 - Implemented long-term memory for verified user data reuse across form submissions, reducing repetitive document processing by ~60%.
 - Added validation and confidence scoring mechanisms to detect missing or conflicting information, achieving ~94% field-level extraction accuracy.
- **MINJA Guardrail – Secure Memory-Augmented LLM Agents**
Python • NVIDIA NIM • LLM Security • Sentence Transformers • Vector Search
 - Reproduced Memory Injection Attacks (MINJA) against memory-augmented LLM agents to evaluate vulnerabilities in long-term agent memory systems.
 - Designed and implemented a guardrail framework that detects and blocks malicious memory-poisoning attempts before memory persistence.
 - Built semantic memory retrieval using Sentence Transformer embeddings and similarity search to evaluate attack and defense effectiveness.
 - Evaluated the proposed guardrail against memory-poisoning attacks, reducing mean ASR from 58.7% to 20.8%, achieving 0% ASR in 4 of 9 categories and 0% false positives on benign records.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java

Frontend: React.js, Next.js, React Native, Redux Toolkit, React Query, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs

Databases: MongoDB, SQL, SQLite, ChromaDB

AI / ML: LLM APIs (Groq, OpenAI, NVIDIA NIM), RAG, PyTorch, Pandas, NumPy

Coursework: DSA, ML, Deep Learning, GenAI, SDLC & Testing
